IEK SEPARATOR VN-32 1P 125A

VN-32 switch disconnecter are switching device without protection functions. From functional point of view, the VN-32 are knife switches with double break of contacts that prevents occurrence of leakage even under environmental conditions of elevated humidity. Switch versions for 100 A have two contact bridges working in parallel in order to improve reliability of contacts and limit heat loss at contact junctions. The switches do not have arc suppression elements and cannot be used for switching on/off of capacitance and inductance loads. Improved wider engagement lever with enlarged contact surface.

Notched terminal clamps reduce the heat loss and increase mechanical stability of the connection.

Wide operating temperature range from -40 to +50 °C.
